

ORBITAL

ORBITAL extending table: pedestal base and elliptical top. Pininfarina Design. The ORBITAL table has a technologically advanced automatic extending system. Thanks to one fluid movement of its metal arms, the two extension leaves slide out from underneath the ceramic top and simultaneously position themselves at the same level, maintaining the table's elliptical shape. A locking device prevents accidental closure. The pedestal base in rigid polyurethane, with a large central hole, and the metal support plate ensure the frame's stability. ORBITAL is a high-tech, design savvy extending table, a scenic presence in your domestic ensemble, the true protagonist of your dining room. Discover all the details!
