

ORBITAL

The extendable Orbital table has always been in a league of its own in terms of pristine polish and contemporary cool; this revamped version has preserved its core identity while further enhancing its iconic stylishness. This new Orbital table stems from a quest to create a streamlined shape despite the widening of the top and an extremely light and contemporary appearance has been successfully achieved. The idea was to showcase the cutting-edge automatic extension system which, with one slick movement of the metal arms, causes two leaves to swing out from underneath the top, simultaneously positioning themselves at the right level and preserving the elegant oval shape. Furthermore, this item can now be personalised with panels in various different materials to be placed on the frame, elevating the product even further and making it suitable for the most sophisticated settings. Base including cover CS4145-C
